- Attaching
- Tin Edging
- Step Indexing
- Label Aire
- Wafer Sealing
- Hang Tags
- Custom Tabs & Indexes
- Blank Index Tabs
- Mylar® Reinforcing

Every Cloud has a Silver Lining...

Kodak closed its carton printing plant in Rochester, NY and reduced staff by 250 jobs. The work from this plant is now being done by other plants, 2 US, 2 Mexican, and 1 Canadian. The good news is Bindagraphics purchased one of their 50" Bobst foil stampers and a Bobst highspeed blanker die cutter with a run speed of 9000 sheets per hour.

Bindagraphics stands ready offering expanded capabilities in stamping, embossing, & die cutting.

Calendar Season is upon us...

From small easel backs to oversized wall hangers. We can produce nearly any type of design. Our state of the art Wire O® binding can insert wire hangers inline. saving both time and money. **A calendar planning tip: Place a thumb notch at the top of each sheet for easy turning around the wire hanger.** Don't forget about our large sheet collating, oversized shrink-wrapping, and tin edging capabilities when planning your calendar project.

Bindagraphics Featured Item – Spiral Bound Book

People are talking about our spiral binding capabilities. From customer supplied signatures, we UV coated the cover 2 sides, gathered, punched, spiral bound, and shrinkwrapped these books individually.

Quality Information Packaging Featured Item – Slide Resource Center

We manufactured a 3 volume set of Eurohinge turned edge binders. We then designed and manufactured a turned edge box with handle and clasp to hold the 3 binders.

What You Need to Know About Embossing

By Brian Gebhart

Part 2 of 3

WORDS TO LIVE BY:

The designer, Bindagraphics, and the engraver should get together at the start of a job.

Definitions

Single-level Die – An embossing or debossing die that changes the surface of the paper at just one level .

Multi-level Die – A die with a number of distinct levels: can be engraved by machine.

Bevel Edge Die - An embossing die with a precise bevel on the image edge, usually between 30 and 60 degrees the broader the angle the greater the illusion of depth.

Chisel Die - A die with a V-shape formed by 2 bevels without a flat bottom. Most frequently used in debossing.

Sculptured Die - A hard -tooled die which embosses many levels through the use of curves, angles and varying depths.

Stamping Die - Usually photochemically etched magnesium: used for flat foil stamping.

Score Die - Usually brass: used to score/crease the paper in conjunction with embossing or stamping.

Would you like to have a very useful embossing primer at your fingertips? Visit the "Publications – Nuts and Bolts" section on our website to review "What You Need to Know About Embossing".

FALL IS BACK TO SCHOOL TIME!

Our next scheduled Binda University will be held in late October, please call Kenna Ruskowski for details.

Ink Jet Imaging & Electronic Binding

- Videojet
- Scitex
- Marconi
- Fixed / Variable Imaging
- Selective Pocket
 - Polybagging
 - Cheshire Labels
 - Blow-ins & Onserts
 - Saddle Stitching
 - Inside / Outside
 - Target Messaging
- USPS Certification
- List Sortation

Quality Information Packaging (QIP)

- Loose-leaf Binders
 - Turned Edge
 - Heat-Sealed
 - Polyvinyl
 - Paper
- Custom Packaging
 - CAD Prototyping
- Game Boards/Pieces
- Silk Screen Printing
- Pad Holders
